

# OPEN HOUSE

August 3, 2011

## UVA GRADUATE ENGINEERING

The leading universities in Virginia offer a distance learning program for qualified engineers to earn a master's degree in several engineering fields. Through the Commonwealth Graduate Engineering Program (CGEP) you can take classes through the University of Virginia and earn a master's degree in Chemical, Civil, Electrical & Computer, Materials Science, Mechanical & Aerospace and Systems & Information.

Dr. James Groves, Director of the UVA Commonwealth Graduate Engineering Program, will present comprehensive information about the different engineering programs available, answer questions, and offer information regarding the process for applying for the CGEP program. This is a unique opportunity for engineers to retain full time employment and take graduate level courses locally from the University of Virginia. The courses are transmitted via two-way, interactive videoconferencing from Charlottesville to the Southwest Virginia Higher Education Center. Students can earn a non-research Masters of Engineering degree by completing ten courses in an approved Plan of Study.
